

CXA2525AM/AN

RF Amplifier for CD Player and CD-ROM

Description

The CXA2525AM/AN is an IC for RF signal processing of CD player and CD-ROM.

Features

- Wide-band RF amplifier. (RF signal $f_c \geq 12\text{MHz}$)
- RF equalizer (T type)
- EFM time constant can be adjusted (with switching function)
- APC (Automatic Power Control) function
- Power saving function

Functions

- RF summing amplifier
- RF equalizer
- Focus error amplifier
- Tracking error amplifier
- APC circuit

Absolute Maximum Ratings

- Supply voltage V_{CC} 7 V
- Storage temperature T_{stg} -65 to +150 °C
- Allowable power dissipation P_D 500 mW

Operating Conditions

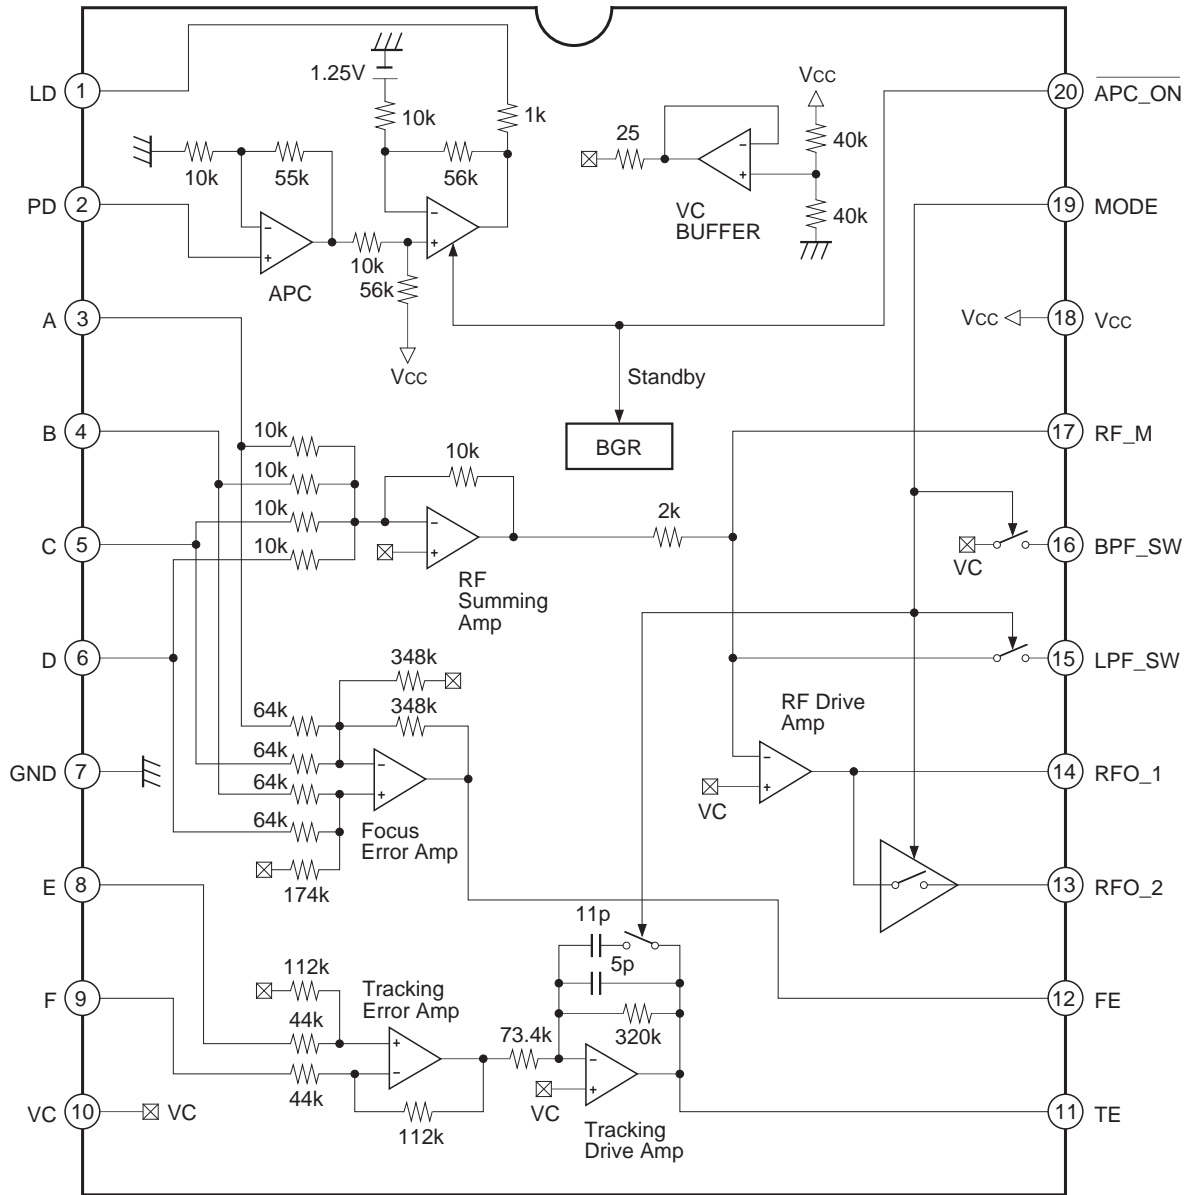

- Supply voltage $V_{CC} - GND$ +3.0 to +5.5 V
- Operating temperature T_{opr} -20 to +75 °C

Applications

- CD players
- CD-ROM drives

Sony reserves the right to change products and specifications without prior notice. This information does not convey any license by any implication or otherwise under any patents or other right. Application circuits shown, if any, are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits.

Block Diagram

Pin Description

Pin No.	Symbol	I/O	Equivalent circuit	Description
1	LD	O		APC amplifier output.
2	PD	I		APC amplifier input.
3 4 5 6	A B C D	I I I I		Input of RF summing amplifier and focus error amplifier.
7	GND			Ground.

Pin No.	Symbol	I/O	Equivalent circuit	Description
8 9 11	E F TE	I I O		Tracking error amplifier input for Pins 8 and 9; tracking error drive output for Pin 11.
10	VC	O		$(V_{cc} + GND) / 2$ DC voltage output.
12	FE	O		Focus error amplifier output for Pin 12.
13	RFO_2	O		Buffer switch output which sets the RF signal time constant. OFF when Pin 19 is connected to Vcc, ON when it is connected to GND.
14 17	RFO_1 RF_M	O I		Non-inversion input of RF drive amplifier for Pin 17; RF signal output for Pin 14; resistance value connected between Pins 14 and 17 which determines the low frequency gain of RF drive amplifier.

Pin No.	Symbol	I/O	Equivalent circuit	Description
15	LPF_SW	O		Transistor switch output which sets the LPF cut-off frequency of RF amplifier. OFF when Pin 19 is connected to Vcc, ON when it is connected to GND.
16	BPF_SW	O		Transistor switch output which sets the RF amplifier BPF boost. OFF when Pin 19 is connected to Vcc, ON when it is connected to GND.
18	Vcc			Vcc.
19	MODE	I		Multiple-speed mode switching input. Vcc : High multiple-speed mode GND: Low multiple-speed mode
20	APC_ON	I		APC amplifier ON/OFF switching. OFF when connecting to Vcc; ON when connecting to GND.

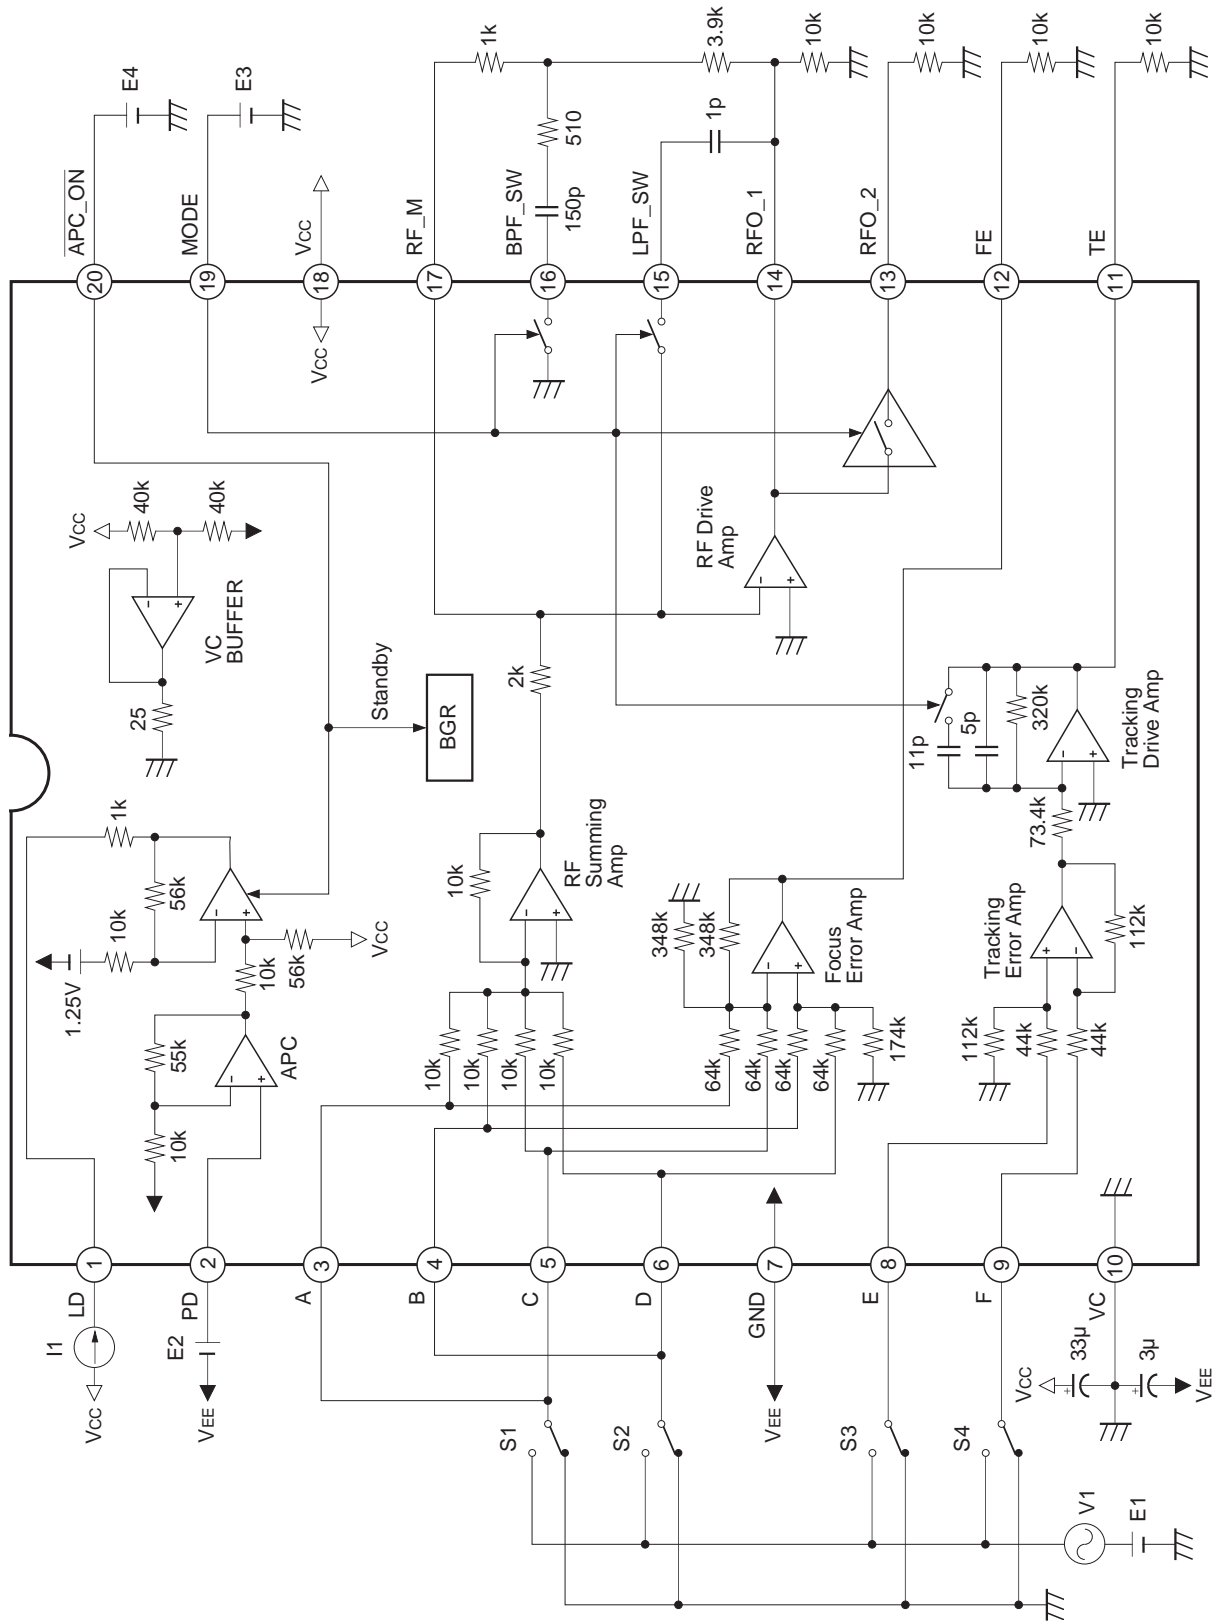

(Ta = 25°C, VCC = 2.5V, GND = VC, VEE = -2.5V)

Electrical Characteristics

Measurement No.	Measurement item	Symbol	SW conditions				Bias conditions				Measurement point	Description of output waveform and measurement method	Min.	Typ.	Max.	Unit

Electrical Characteristics Measurement Circuit

Application Circuit (Double-/sextuple-speed switching)

Application circuits shown are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits or for any infringement of third party patent and other right due to same.

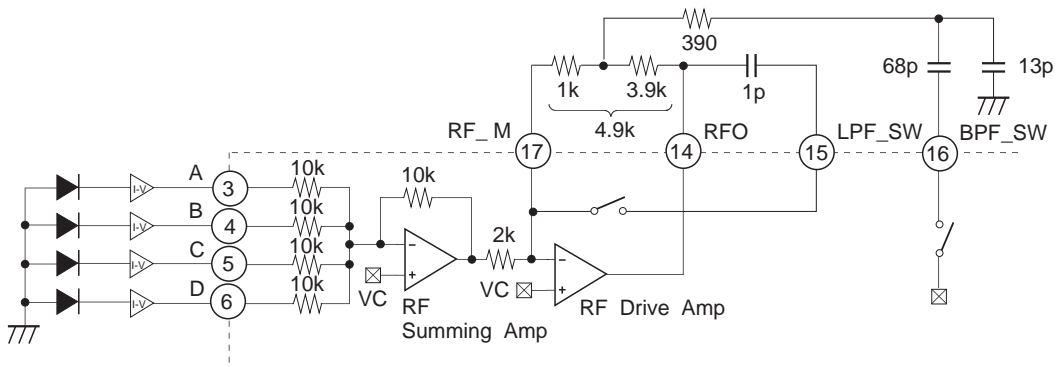

Note on Operation

The RF AC maximum output amplitude is 1.3 Vpp when Pin 13 and 14 are capacitor-coupled shown in Application Circuit.

Description of Operation

RF Amplifier

The signal currents from the photodiodes A, B, C and D are I-V converted, and input to Pins 3, 4, 5 and 6. These signals are added at the RF summing amplifier and inverted at the RF drive amplifier and then output to Pin 14.

The low frequency component of RFO output voltage is as follows:

$$V_{RFO} = \frac{10k}{10k} \times \frac{4.9k}{2k} \times (A + B + C + D)$$

$$= 2.45 \times (A + B + C + D)$$

Focus Error Amplifier

The operation of (B + D) – (A + C) is performed and the resulting signal is output to Pin 12.

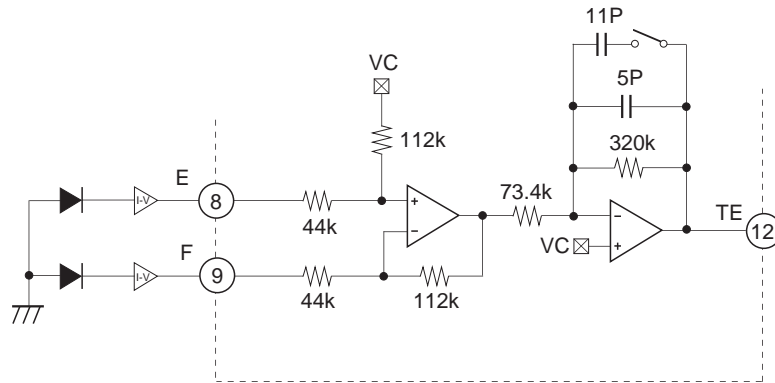

The low frequency component of FE output voltage is as follows:

$$V_{FE} = \frac{348k}{64k} \times (B + D - A - C)$$

$$= 5.43 \times (B + D - A + C)$$

Tracking Error Amplifier

Each signal current from the photodiodes E and F is I-V converted and input to Pins 8 and 9. These signals undergo operational amplification at the tracking error amplifier and tracking drive amplifier, and are output to Pin 12.

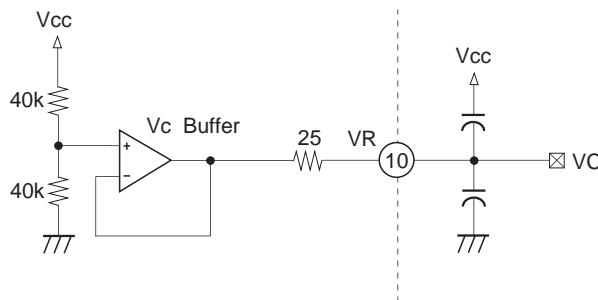

The low frequency component of TE output voltage is as follows:

$$V_{TE} = \frac{112k}{44k} \times \frac{320k}{73.4k} \times (F - E)$$

$$= 11.1 \times (F - E)$$

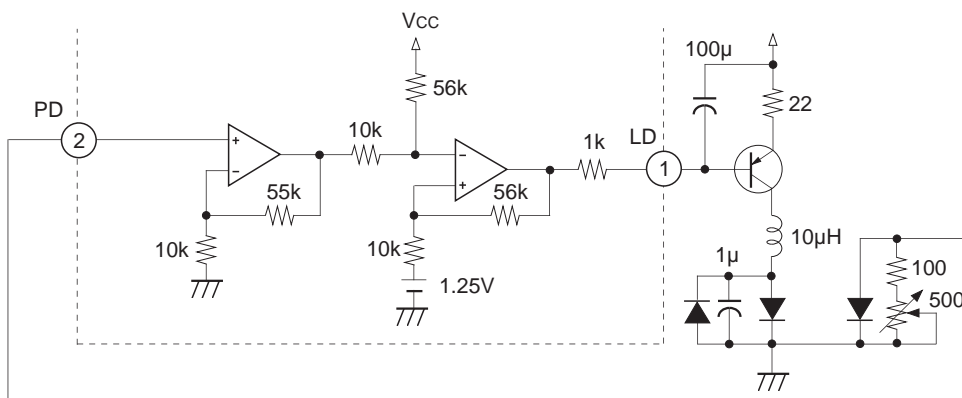

Center Voltage Generation Circuit

The center voltage of VR = (Vcc + GND) is supplied.
The maximum current is approximately ±3mA.

APC Circuit

When the laser diode is driven with constant current, the optical output possesses large negative temperature characteristics. Therefore, the current must be controlled with the monitor photodiode to ensure the output remains constant. When APC_ON pin is connected to GND, APC is ON; connected to Vcc, it is OFF.

Example of Representative Characteristics

*T-EQ As shown in Application Circuit

Package Outline Unit: mm

CXA2525AM

20PIN SOP (PLASTIC) 300mil

SONY CODE		PACKAGE STRUCTURE	
SONY CODE	SOP-20P-L01	PACKAGE MATERIAL	EPOXY / PHENOL RESIN
EIAJ CODE	*SOP020-P-0300-A	LEAD TREATMENT	SOLDER PLATING
JEDEC CODE	_____	LEAD MATERIAL	COPPER ALLOY
		PACKAGE WEIGHT	0.3g

CXA2525AN

20PIN SSOP (PLASTIC)

NOTE: Dimension "*" does not include mold protrusion.

SONY CODE		PACKAGE STRUCTURE	
SONY CODE	SSOP-20P-L01	PACKAGE MATERIAL	EPOXY RESIN
EIAJ CODE	SSOP020-P-0044	LEAD TREATMENT	SOLDER / PALLADIUM PLATING
JEDEC CODE	_____	LEAD MATERIAL	COPPER / 42 ALLOY
		PACKAGE WEIGHT	0.1g

NOTE : PALLADIUM PLATING
This product uses S-PdPPF (Sony Spec.-Palladium Pre-Plated Lead Frame).
