

SI-3000C Series

5-Terminal, Multi-Function, Full-Mold, Low Dropout Voltage Dropper Type

■Features

- Compact full-mold package (equivalent to TO220)
- Output current: 1.5A
- Low dropout voltage: $V_{DI} \leq 1V$ (at $I_o = 1.5A$)
- Variable output voltage (rise only)
May be used for remote sensing
- Output ON/OFF control terminal is compatible with LS-TTL. (It may be directly driven by LS-TTL or standard CMOS logic.)
- Built-in foldback overcurrent (SI-3033C: Drooping type overcurrent), overvoltage, thermal protection circuits

■Applications

- For stabilization of the secondary stage of switching power supplies
- Electronic equipment

■Absolute Maximum Ratings

(T_a=25°C)

Parameter	Symbol	Ratings				Unit
		SI-3033C	SI-3050C/3090C	SI-3120C/3150C	SI-3240C	
DC Input Voltage	V _{IN}	20	35	35	45	V
Voltage of Output Control Terminal	V _c	V _{IN}				V
DC Output Current	I _o	1.5 ²				A
Power Dissipation	P _{D1}	18(With infinite heatsink)				W
	P _{D2}	1.5(Without heatsink, stand-alone operation)				W
Junction Temperature	T _j	-40 to +125				°C
Ambient Operating Temperature	T _{op}	-30 to +100				°C
Storage Temperature	T _{stg}	-40 to +125				°C
Thermal Resistance (junction to case)	R _{th(j-c)}	5.5				°C/W
Thermal Resistance (junction to ambient air)	R _{th(j-a)}	66.7(Without heatsink, stand-alone operation)				°C/W

■Electrical Characteristics

	Conditions	V _c =0.4V										

*1: "A" may be indicated to the right of the Sanken logo.

*2: VIN(max) and Io(max) are restricted by the relation Pd(max)=(VIN-Vo)•Io=18(W).

*3: Refer to the dropout voltage.(Refer to Setting DC Input Voltage on page 7.)

*4: Is1 is specified at -5(%) drop point of output voltage Vo on the condition that VIN=Vo+3V, Io=0.5A.

*5: Output is ON even when output control terminal Vc is open. Each input level is equivalent to LS-TTL. Therefore, it may be directly driven by an LS-TTL circuit.

*6: A foldback type overcurrent protection circuit is built into the Ic regulator (excluding SI-3033C). Therefore, avoid using it for the following applications as it may cause starting errors:

- (1) Constant current load (2) Plus/minus power (3) Series power (4) Vo adjustment by raising ground voltage

	Conditions	V _c =0.4V										

*1: "A" may be indicated to the right of the Sanken logo.

*2: V_{IN(max)} and I_{O(max)} are restricted by the relation P_{D(max)}=(V_{IN}-V_O)•I_O=18(W).

*3: Refer to the dropout voltage.(Refer to Setting DC Input Voltage on page 7.)

*4: I_{s1} is specified at -5(%) drop point of output voltage V_O on the condition that V_{IN}=V_O+3V, I_o=0.5A.

*5: Output is ON even when output control terminal V_c is open. Each input level is equivalent to LS-TTL. Therefore, it may be directly driven by an LS-TTL circuit.

*6: A foldback type overcurrent protection circuit is built into the I_c regulator (excluding SI-3033C). Therefore, avoid using it for the following applications as it may cause starting errors:

- (1) Constant current load (2) Plus/minus power (3) Series power (4) V_O adjustment by raising ground voltage

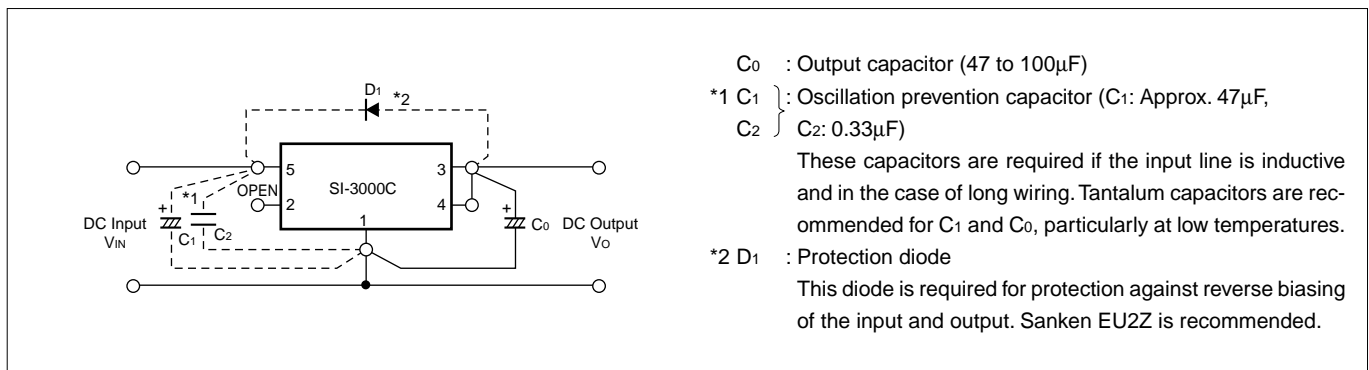

■Outline Drawing

■Block Diagram

■Standard External Circuit

■ T_a - P_D Characteristics

$$P_D = I_o \cdot [V_{IN(\text{mean})} - V_o]$$

External Variable Output Voltage Circuit

1. Variable output voltage with a single external resistor

The output voltage may be increased by inserting resistor R_{EX} between terminals No.4 (sensing terminal) and No.3 (output terminal). The current I_{REX} flowing into terminal No.4 is 1mA (typ.)(SI-3033C:0.43mA (typ.)), therefore the adjusted output voltage V_{OUT} is:

$$V_O = V_{04} + I_{REX} \cdot R_{EX} \quad *V_{04}: \text{output voltage of SI-3000C series}$$

However, the built-in resistor (between terminals No. 4 and No.1) is a semiconductor resistor, which has approximately thermal characteristics of +0.2%/°C.

It is important to keep the thermal characteristics in mind when adjusting the output voltage.

2. Variable output voltage with two external resistors

The output voltage may be increased by inserting resistors R_{EX1} between terminals No.4 (sensing terminal) and No.3 (output terminal) and R_{EX2} between terminals No.4 and No.1 (ground terminal).

The current I_{4IN} flowing into terminal No.4 is 1mA (typ.)(SI-3033C: 0.43mA(typ.)) so the thermal characteristics may be improved compared to the method shown in 1 by setting the external current I_{REX1} at approximately 5 times the value of I_{4IN} (stability coefficient $S=5$).

The adjusted output voltage V_{OUT} in this case is:

$$\begin{cases} V_O = V_{04} + R_{EX1} \cdot I_{REX1} \\ I_{REX1} = S \cdot I_{4IN} \end{cases}$$

The value of the external resistors may be obtained as follows:

$$R_{EX1} = \frac{V_O - V_{04}}{S \cdot I_{4IN}}, \quad R_{EX2} = \frac{V_{04}}{(S-1) \cdot I_{4IN}}$$

* V_{04} : Output voltage of SI-3000C series

S: Stability coefficient of I_{4IN} (may be set to any value)

Note: In the SI-3000C series, the output voltage increase can be adjusted as mentioned above. However, when the rise is set to approximately 10V compared to output voltage V_{04} , the necessary output current may not be obtained due to the S.O.A. protection circuit in the SI-3000C series.

■Typical Characteristics

($T_a=25^\circ\text{C}$)

Io vs. VDIF Characteristics

Temperature Coefficient of Output Voltage(SI-3050C)

Rise Characteristics(SI-3033C)

Rise Characteristics(SI-3050C)

Rise Characteristics(SI-3240C)

Overcurrent Protection Characteristics(SI-3033C)

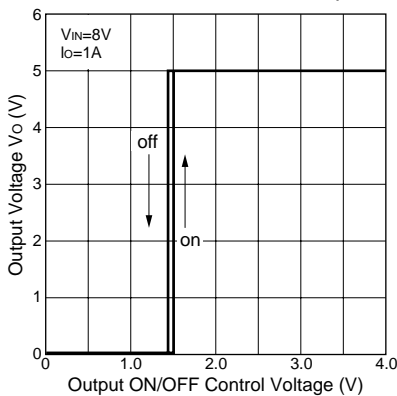

Overcurrent Protection Characteristics(SI-3050C)

Overcurrent Protection Characteristics(SI-3240C)

ON/OFF Control Characteristics(SI-3050C)

Thermal Protection Characteristics(SI-3050C)

Note on Thermal Protection:

The thermal protection circuit is intended for protection against heat during instantaneous short-circuiting. Its operation is not guaranteed for short-circuiting over extended periods of time.
