

### ■ General Description

AT123S is a PCI arbiter. It allows users to extend system PCI devices or slots without piecing additional circuit to simply design complexity and increase system stability. AT123S also provides STOP# input pin with that extended PCI devices is able to instruct the PCI master to prematurely end the transaction on the current data phase same as one defined in PCI specification.

### ■ Features

- PCI Arbiter  
Extend PCI Devices from One to Three
- PCI Clock Frequency  
Support PCI Clock range from 25MHz to 66MHz
- All AME's Lead Free Products Meet RoHS Standards
