

# T73327 / 73327A / 73327B

15-36 MHz, 3.3V VCXO

## Applications

- Crystal-driven clock source for low cost set top boxes

## General Description

The TLSI T73327/73327A is a single-chip, low-jitter Voltage-Controlled-Crystal-Oscillator. The device accepts a 15 MHz-36 MHz crystal input and produces a low-jitter output at the same frequency. A 0V to +3.3V control signal is used to fine-tune the output clock frequency in the  $\pm 120$ ppm range.

## Features

- +3.3V operating voltage
- Uses inexpensive pullable crystals
- 12mA drive capability at TTL levels
- Low Cost
- 240 ppm pull range ( $\pm 120$  ppm)
- Excellent pull range linearity
- 8-pin SOIC, 8-pin MSOP packages available
- Alternate industry pinouts available

Table 1. Pin Description

Name	Pin No.			Type	Description
	73327	73327A	73327B		
X1	1	1	1	Xi	Crystal connection. Connect to a 15 MHz - 36MHz pullable crystal
V <sub>DD</sub> **	2**	6	2	P	This pin can alternately be used to connect V <sub>DD</sub> instead of pin 6 or left unconnected (for T73327 only).
V <sub>IN</sub>	3	3	3	I	Tuning control input. Zero to +3.3V signal controls the frequency of the VCXO.
GND	4, 7	4	4	P	Connect to ground.
CLK	5	5	6	O	Clock output
NC**	6**	-	5	NC	This pin can alternately be used to connect V <sub>DD</sub> instead of pin 2 or left unconnected (for T73327 only).
NC	-	2, 7	7	NC	Do not connect
X2	8	8	8	Xi	Crystal connection. Connect to a 15 MHz – 36 MHz pullable crystal.

**Legend:** I = Input  
O = Output  
P = Power supply connection

Xi = Crystal connections  
NC = No connection

**\*\*Note:** On the T73327 only, both pin 2 and pin 6 are internally connected to V<sub>DD</sub>. Either pin or both can safely be connected to V<sub>DD</sub> without damaging the part. Alternately, at the user's option, one pin may be used for V<sub>DD</sub> with the other pin being left unconnected (NC).

Table 2. Absolute Maximum Ratings

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. These ratings are stress specifications only and correct functional operation of the device at these or any other conditions above those listed in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.
